WEBSTERS TABLES,

For
- Simple Intereſt direct, at 10, 8, 7½ 7, 6, and 5 l. *per Centum*, from moneth to moneth to twelve moneths.
- Simple Intereſt to rebate, at 8 l. *per Centum*, from moneth to moneth to 36 moneths.
- Simple Intereſt to rebate at 7 and 6 l. *per Centum*, from moneth to moneth to twelve moneths.

ALSO,

His Tables for Compound Intereſt, with his true valuation of Annuities, Leaſes, Fines and Reverſions: With a neceſſary Addition concerning halfe-yearly and quarterly payments.

TOGETHER WITH

A neceſſary Table for the ſpeedy and exact ſumming up of the price of Commodities: ſerving alſo for a Table of Reduction, and for ſimple Intereſt direct at 5 *per Centum*.

The third Edition, with very large Additions,
BY
WILLIAM WEBSTER.

LONDON,
Printed by *M. Fliſher* for *Nicolas Bourne* at the South Entrance of the *Royall Exchange*. 1634.

BIBLIOTHECA
COLL. SS. TRIN.
DUBLIN.

TO THE WORshipfull the *Maſter, Wardens, Aſſiſtants*, and the reſt of the Company of *Salters* of *London*: *William Webſter* (Brother of the ſaid Company) wiſheth continuance of amity and brotherly love, with all earthly happineſſe here; and heavenly, hereafter for ever.

CONſidering with my ſelfe (Worſhipfull and duely reſpected friends) how many Bookes and Pamphlets of ſlender uſe for the Common wealth have their Patrons to countenance them, and withall conſidering the uſefulneſſe of this Treatiſe, I could not but conceive it worthy of Patronage; and then knowing well, that (ſo well ſuiting with the affaires of Trade and Commerce) it would be moſt pertinent to preſent it to ſome one of the Companies of this famous City; I was drawne (as it were)

were) with a threefold cord of love, duty, and gratitude, rather unto your Worſhips than any other, thus humbly to dedicate this fruit of my indeavours, which I deſire may not be valued according to the volume, which is but ſmall, but the uſe, which is more, and my good will, which exceedeth both; whereunto if my ability were anſwerable, I ſhould preſent you with better teſtimonies thereof; nor doe I doubt of your kinde acceptance of this free and unfained tender of my love and due obſervance, grounding my confidence upon the conveniency of the thing, in regard of your owne and others occaſions, your mature Iudgments, and readineſſe to favour and further any thing that any way tendeth to the benefit of the Commonwealth, the good whereof your care is to procure and conſerve. The proſperity whereof, and of this worthy and well-govern'd Fellowſhip, I, moſt heartily wiſhing, remaine

At all times ready at your Worſhips ſervice,
WILLIAM WEBSTER.

To the Reader.

READER, these Tables (or rather part of them) having twice already past the Presse, and found good liking, I was thereby incouraged much to inlarge them, so that now (more absolute than before) they are the third time committed to the Presse, and being now of larger use for the resolving of doubts, the procuring of ease, the sparing of time, and preventing of wrong, I cannot doubt of their good acceptance; nor doe they tie any to strictnesse in taking of Interest, though they justly shew it, wherein they onely bound the excesse, but not determine the extent: The reason that I have inlarged my table for rebatement after 8 per centum, *from* 12 *moneths to* 36, *is because that Table will not hold proportion (as that for direct Interest) so that the true Interest to rebate of any other number of moneths, save those only which are set downe, cannot by it be gathered, and there may oft be occasion to receive and pay upon rebatement for more than* 12 *moneths, but seldome for more than* 36, *except by way of compound Interest, which belongs to another of my tables in this booke, which is of that nature; and so with my good wishes to my welwillers, I rest.*

 W. W.

GOe booke abroad, and ſee that thou
unpartially decide
Caſes of Intereſt, where thou find'ſt
ſuch cauſes to be tride.
Such is the world, that in the world
thou need'ſt not idle be;
A common uſe, is taking uſe,
ſo uſe enough for thee;
To Lender and to Borrower both,
thou art an equall friend
For eaſe, on eaſie tearmes to each,
thou ready art to lend:
To whom commend me, and when moſt
thou ſeeſt come in their gaines,
Then in their eares but whiſper this,
my maſter tooke ſome paines:
To Buyers and to Sellers too
thou art an uſefull booke,
The like not extant, ſhades (to thee)
are thoſe that like thee looke.
And though in Intereſt thus thou deal'ſt
thou not approv'ſt at all
Of uſurie which may (for thee)
beneath juſt cenſure fall.
Thou not conclud'ſt ſuch contracts made
are lawfull yea or no,
But truly to performe the ſame
(by parties both) doſt ſhow.
In onely this, thou art a guide,
but elſe, as is moſt fit
Thou to the guidance leaveſt all
of grace and holy writ.

DI-

DIRECTIONS for theſe Tables *enſuing.*

THE Paines I have taken to make theſe Tables ſo plaine and eaſie, might ſave me the labour of giving directions, which yet I will not altogether omit, leſt any ſhould loſe the benefit of them for want of the ſame.

The principall ſummes are placed in the firſt row or Colume towards the left hand, and right anſwering to every principall ſumme; ſtands the juſt intereſt thereof under the title of moneths, from month to moneth for 12 moneths. So may you eaſily ſee, that 1000 pounds in 4. months yeelds 26 pounds, 13 ſhillings 4 pence. 900 l. in the ſame time yeelds 24 l. 0 s. 0 d. 90 l. in the ſame time yeelds 2 l. 8 s. 0 d. and 9 l. in the ſame time yeelds 4 s. 9 d. 2 far-

things. All which added together, doe make 53 pounds, 6 shillings, 1 peny, 2 q. which is the just Interest of 1999 l. in 4 moneths, at 8 *per Centum.* And thus may you quickly find the just Interest of any summe from month to moneth at 10. 8. $7\frac{1}{2}$. 7 & 6 *per cent.* and likewise the interest to bee rebated for any summe paid before due from month to moneth at 8, 7 & 6 *per Centum.*

And whereas in the former impressions (guided by custome) I had calculated the Interest of dayes after thirty to the moneth, whereby the said Interest did rise to somewhat more than right, I have now more exactly calculated the same after 365 dayes to the yeare, so that now the receiver may well be guided by these Tables in taking the Interest for dayes.

And thinking it too tedious to set down all the dayes of a moneth, I have onely set downe, 1, 2, 3, 4, 5, 10, 20; by which you may easily know the Interest of any daies in a moneth, as if you would know the Interest of 8 dayes, doe but double that which you find 4 dayes to yeeld; and if you would know what 18 daies yeeld, put that

which

which 10 dayes yeeld to that which foure daies doubled doth yeeld, or elſe take that which two dayes yeelds, from that which 20 dayes yeeld, and both wayes you have that which 18 dayes yeeld, and ſo for any other dayes: as for Intereſt to rebate, it differs ſo little in caſe of dayes from direct Intereſt, that for it I have ſet downe no more dayes but 5, 10 and 20. for the difference that ariſeth in leſſe than 5 dayes is ſo little, that it is not materiall.

Alſo you may find the Intereſt of pence by theſe Tables, yea of farthings, as if you would know what 1 peny yeelds in one month, it is the 12 part of that which 1 s. yeelds in one moneth, that is $\frac{5}{72}$ parts of a farthing, and a farthing yeelds the fourth of that, and is $\frac{1}{288}$ part. But the Intereſt of pence and farthings is not material except it be in a caſe of controverſie, or for twelve months: as if you would know what 100 pound, or any other ſumme will ariſe unto in 7 yeares, taking intereſt upon intereſt, then it is fit to know what pence and farthings doe yeeld in a yeare, & that is plainly ſhewed by theſe Tables, for one penie doth yeeld the ſame in twelve moneths,

that

that one shilling doth yeeld in one month: two pence yeelds the same in 12 months, that one shilling yeelds in two moneths: Three pence the same that one shilling yeelds in three moneths: and one farthing still yeelds $\frac{1}{4}$ of that which one penie yeelds, and so of the rest. And this I hope being well observed will suffice for directions for the understanding of these easie Tables ensuing. And for the rest of the Tables which are framed by the decimall Arithmeticke, their directions follow them.

Reader, I did thinke to haue set downe Fractions in these Tables, & so to have expressed the just & exact Interest either direct, or to be rebated to the five & twentith part of a farthing, but cõsidering that such Fractions might perhaps amaze some that could not readily understand them, and would bee of small use, I have therefore set downe the Interest to the halfe of a farthing; and what is lesse, I have omitted: yet I have set downe the iust interest of shillings and the interest for dayes, because I cannot otherwise expresse so smal interest. And this forme I hope will give enough satisfaction: and for the understanding of

these

theſe fractions whereof your firſt is $\frac{1}{25}$ of one farthing in the direct intereſt of 10 s. for one month, you muſt underſtand it ſo, as if a farthing bee divided into 25 parts, this fraction containes five of thoſe parts, and ſo of the reſt, and this fraction is all one with $\frac{1}{5}$ but if it were ſo writ it would bee harder to adde up with other fractions, that can admit of no leſſer Denominators than 25, therefore I make them all ſo. And in adding of them together, you muſt onely adde the upper numbers called the Numerators, and ſo oft as you finde 25 your common Denominator in that addition, ſo many farthings it containes.

HEre followeth a compendious Table (framed by the decimall Arithmetick) for ſimple intereſt direct at 7 and an halfe *per Centum*; directions for the underſtanding of the ſame, doe follow next after the decimall Tables for ſimple intereſt to rebate at 8 *per Centum*.

But thoſe directions being onely for moneths, take here theſe few for dayes.

This rate being under 8 *per Centum*, you may reckon thirty dayes to the moneth, take therefore the Intereſt for one month, then for one day take the thirtith part of that number, for two dayes $\frac{1}{15}$ part, for three dayes $\frac{1}{10}$ part, for ſixe dayes $\frac{1}{5}$ part, &c. thus: I would know the Intereſt of 687 l. for ſixe dayes at $7\frac{1}{2}$ *per Centum*: I finde in this Table under one moneth, and againſt the figure 6. this number, —37500
againſt the figure 8. this number, —05000
againſt 7. this number, ——04375
which being added together,
being for one moneth, is ——42 9375
wherof $\frac{1}{5}$ part being for 6 daies is—85875
from which number ſtriking off 5 figures, which is all, it ſhowes that 17 s. 02 d. is the intereſt of 687 l. for ſixe dayes at $7\frac{1}{2}$ *per Centum*; but for a more eaſie generall rule you may take notice that at $7\frac{1}{2}$ *per Cent.* taking thirty dayes to the moneth, every 100 l. gives 5 d. by the day, &c.

NOw for the intereſt of dayes at 7 *per Cen.* know that one thouſand pounds in one day yeelds three ſhillings ten pence and two third parts of a pennie, which brought into the termes of the other Fractions in theſe Tables is three ſhillings ten pence two farthings, ſixteene twenty five parts of a farthing, & two third parts of $\frac{1}{25}$

One hundred pounds in one day yeelds foure pence, two farthings, $\frac{15}{25}$ and $\frac{2}{5}$ of $\frac{1}{25}$

Ten pounds in one day yeelds 1 farthing $\frac{2}{25}$ of one farthing, & two third parts of $\frac{1}{25}$

One pound yeelds $\frac{1}{25}$ and two third parts of $\frac{1}{25}$ One ſhilling in one day yeelds $\frac{1}{25}$ parts of one farthing.

This is ſome help; but for a more generall rule: when you know what intereſt your whole ſum, whatſoever it be, yeelds in one moneth, for twenty dayes take two third parts of your months intereſt, for fifteene dayes take one halfe of the ſame, for ten dayes take one third part of it, for ſixe dayes take one fifth part of it, for 5 dayes take one ſixth part of it, for 4 dayes take two fifteen parts of it, for three dayes take one tenth part, for two dayes one fifteenth part, for one day take one thirtieth part

And

And for ſeven daies take one ſixth part, & one fifteenth part; for eight dayes take one fifth part, and one fifteenth part: for nine dayes take one fifth part, & one tenth part. And ſo by theſe aliquot parts of thirty, you may eaſily finde the intereſt of any dayes in a moneth when you know the intereſt of a moneth.

THis Table is ſhort and compendious, but of large uſe, inſtantly reſolving ow much ready money will pay any mme before due, from one ſhilling to n thouſand pounds, from moneth to oneth from 13 moneths (where the for-er Table ceaſeth) to 36 months, rebating y way of ſimple Intereſt at 8 *per Centum*. It will be hard to be underſtood without irections; but with directions moſt plaine d eaſie. The digits or ſingle figures in the rſt columne towards the left hand you uſt accept according to the ſumme to be aid upon Rebatement: As if your ſumme e 9000 l, then you muſt take the figure 9 or 9000 l, and the number anſwering to e ſaid 9 in the ſpace under your number f moneths (cutting off three figures to-ards the right hand) anſwereth to the ueſtion. Likewiſe, if your ſumme be 900 l, en the ſame number (cutting off foure gures towards the right hand) anſwereth . And if your ſumme bee 90 l, then the me number (cutting off five figures) an-wereth it. And if your ſumme be 9. then e ſame number (cutting off ſixe figures) nſwereth it. And if your ſumme be 18 s.

then the ſame number (cutting off 7, that i
all the ſaid figures) anſwereth it, acceptin
the ſaid figures ſo cut off, as I ſhall direc
you. If you underſtand Decimall Arithme
tick, then you will know how to accep
them without further directions; but if yo
underſtand not that kinde of Arithmetic
then know that the ſtroke with which yo
cut off the figures, as is directed, is calle
your *prime Line*: thoſe figures which re
maine on that ſide of your *prime Line* to
wards the left hand, are whole number
betokening pounds; the reſt on the othe
ſide of your *prime Line*, are parts of on
pound, which are thus to be taken and a
cepted; Every unite contained in that fi
gure which doth ſtand next your *prime Li*
betokeneth 2 ſ, ſo 1 in that place betok
neth 2 ſ: 2. in that place betokeneth 4 ſ, &
Evere unite contained in the ſecond figu
from the ſaid *Line*, betokeneth 2 d and $\frac{1}{2}$
one penny: ſo 4 in that place betokene
9 d $\frac{1}{2}$: and 5 in that place betokeneth 1 ſ
6 in that place betokeneth 1 ſ 2 d $\frac{1}{2}$ &c. E
very unite in the third figure betokene
almoſt one farthing, comming ſo nea
that 5 in that place betokeneth 1 d $\frac{1}{5}$;
th

hat all that are in that place under or over
, you may without any materiall error ac-
ept for farthings; ſo may you take 4 in that
lace for 1 d, &c. Every 5 ſtanding in the
ourth place from your ſaid *line*, you may
ke for half one farthing; and what is leſſe
an halfe a farthing is not (in this caſe) to
e regarded: for theſe payments doe not
quire any ſuch curious exactneſſe So then
any figures follow in the fift, ſixt, &c. pla-
s from the ſaid *line*, you need not regard
em; for though there bee many of them,
ey will not all extend to halfe a farthing,
t they may make you the bolder to take
ery unite in the third place for a farthing
aforeſaid. And now to make al this plain
example: If I would know how much
ady mony will pay 9000 l 32 moneths
fore due, I looke in the Table, and in the
ace under 32 moneths anſwering to the
gure 9, I finde this number 7417575,
hich parted with the *prime line*, and ac-
pted as aforeſaid, makes as here appeares
17l 11 s 6 d, and ſo much will pay
000 l 32 moneths before due. I would
ow how much ready money will pay
0 l 32 moneths before due; then I looke

againſt the figure 8 in the ſame columne where I finde this number 659| 340 which parted & brought into coine, ſtan thus 6591 6 s 9 d $\frac{3}{7}$ &c. Now if I woul know how much ready money will p 98761 32 moneths before due, then I loo under the ſaid number of moneths, whe I find foure numbers anſwering to the ſai foure figures, *viz.* to 9.8.7.& 6. whic numbers I place thus, ſetting two cyphe to that nũber which anſwereth to 9000 and one cypher to that which anſwere to 8001; thus:

741757500	Then adding them togeth
65934000	and cutting off now five f
5769225	gures, becauſe I put there
494505	2 cyphers, I finde it mak
8139|55230	in coine 81391 11 s 0

where obſerve that I ſ downe but ſixe figures for the number a ſwering to 6 l, nor need I ſet down the ſe venth, for it would be ſuperfluous, bein kening ſo little as could not properly be brought to my ſumme. This is the orde and uſe of this Table, which I hope thi plaine direction hath made moſt direct an eaſie. You muſt well obſerve the placing o

y numbers for addition, where you ſee
ery number loſeth a place of that ab ove
& the number anſwering to 1 muſt loſe
yo places when it follows any of the reſt,
d gaine no place if it goe before the reſt:
hich order you muſt follow. Now if I
ould know how much ready money
ill pay 18 s 3 2 moneths before due, then
ake the number anſwering to the figure
& ſtrike off ſeven figures with my *prime*
e thus, |7417575, whereby I ſee that
s 10 d will pay 18 s 32 moneths be-
e due. For 2 s I take the number under
moneths, anſwering to the figure 1, frō
hich I cut away ſeven figures, which is
e more than is in the ſaid number, ſup-
ing that want with a cypher thus,
24175: ſo I ſee that 1 s 7 d ¼ will pay
32 moneths before due: and conſe-
ntly halfe that, which is 9 d ⅛ will pay
32 moneths before due.

The Directions for the former Decimall Table at 8 *per Centum*, serve also for these at 7 and 6 *per Centum.*

HAving published these Tables for Interest to be rebated, the like whereof were never yet extant, because I would not have their use and so their worth to be unknowne; I have thought good to set down something concerning the same.

The first use whereof is this: by them any man that sels any commoditie, and gives day of paiment, if then or afterwards he bee willing to take in his money upon Rebatement after 8, 7 or 6 *per Cen.* may know justly from moneth to moneth what interest hee is to rebate, and so how much he is to receive. As for example: if his summe be 120 pounds, and the time that hee giveth be twelve moneths, and at the end of one moneth he be content to take in his money upon rebatement at 8 *per Cent.* hee may see by that Table, that for the 100 l receiveth 11 moneths before due, he must rebate six pound, 16 shillings, 7 pence 3 farthings, and for the 20 pounds he must rebate 1 pound 7 shillings, 3 pence 3 farthings, and $\frac{1}{2}$ of a farthing, both which doe make 8 pound 3 shillings 11 pence 2 farthings $\frac{1}{2}$ which taken out of 120 pounds, there resteth 111 l 16 s 0 d 1 q $\frac{1}{2}$ to be received, and so for

any other ſummes, and this buſineſſe is often carried unequally to the wrong of one of the parties, becauſe this kind of intereſt is hard to be found out, which I hope will be reformed by theſe Tables.

Another uſe of them is this: by them may any man that uſeth to buy or ſel upon time, know how much he gaines by taking, and how much hee looſeth by giving of time, which without the knowledge of this kind of intereſt he cannot juſtly know: as for example, he that buyes a commoditie & hath 12 moneths day for payment, and ſelleth the ſame preſently for readie money, his gaines is not 8 l. upon the 100 l. but his preſent net gaines is ſo much upon the 100 l. as 100 l. yeelds by theſe Tables in 12 moneths, that is, 7 l. 8 s. 1 d. 3 q. for ſo much ſhould hee of whom hee bought the commoditie rebate him upon the 100 l. if he preſently paid it in, 12 moneths before due. So if he ſells his commoditie for the ſame price ready money at the end of two moneths, then his preſent gaines is ſo much upon the 100 l. as 100 l. yeelds in theſe tables in ten moneths, &c. Thus may he juſtly know what he gaines or looſeth by the time;

time; what he gaines or loſeth by the price hee muſt reckon otherwiſe: if a Merchant buy a commodity at 8 s the yard ready mony, and ſell the ſame preſently at 9 s the yard, but gives (according to their phraſe) 4 foure months day of payment, the queſtion is how much is his preſent gaines upon 100 l. Firſt, ſee what hee gaines by the price: if 8 s gaine 1 s, then 100 l gaines alſo an eight part of it ſelfe, that is, 12 l 10 s, then ſee what he loſeth by the time: and firſt, becauſe here are ſeveral paiments which muſt be reduced to one paiment, I will ſhew how to know at what time any ſuch ſeverall paiments are to bee paid at once.

In this queſtion the time given is ſuppoſed to be 4 foure months, that is, one fourth part at 4 months: another fourth part at 8 moneths: another at 12 moneths, and another at 16 moneths. Now for as much as this is to be paid by fourth parts, I take the fourth part of every ſeveral time of paiment, & thoſe fourth parts ſo taken being put together make juſt the time when it is to be paid at once. For example, the fourth part of 4 months is 1; the fourth part of 8 months is 2; the fourth part of 12 moneths

is

is three: the fourth part of 16 months is 4: all which, *viz.* 1, 2, 3, and 4, doe make 10 moneths, the iuſt time when ſuch foure paiments are to bee paid at once: then I looke in the Table, which is to rebate at 8 *per Centum*, and finde that 100 pounds in 10 moneths yeelds to rebate 6 l. 5 ſ. 0 d. and ſo much hee loſeth by the time, for ſo much he ſhould rebate, if he would take in his money before hand: then I take 6 l. 5 ſ. 0 d. which is loſt by the time, out of 12 l. 10 ſ. 0 d. which was gained by the price, and there reſteth 6 l. 5 ſ. 0 d. and ſo much is his preſent gaines upon the 100 l: onely he runnes the hazard of truſting, except he can receive in his money upon rebatement.

Other uſe may be made of theſe Tables as occaſion offers, but this is ſufficient to ſhew how very neceſſary they are for all Tradeſmen.

Directions for theſe Tables enſuing, *which are for compound Intereſt.*

THe yearly increaſe of 10 l. put forth, or forborne at compound intereſt after 8 *per Centum*, for any terme of years to 31. As alſo the like yearly increaſe of an annuitie of 10 l. and the juſt worth or value of an Annuity of 10 l. for any the like yeares, and the decreaſe of 10 l. for paiment before due for any terme of yeares aforeſaid, theſe are ſo plainly ſet downe in theſe Tables right anſwering to any number of yeares which you deſire, that to finde theſe I need give no directions, but by theſe to finde the like yearly increaſe or decreaſe of any other ſumme is as followeth.

If your ſumme or annuity conſiſts of tennes as 20 l. 30 l. 40 l, &c. then it is no more but to take away one Cypher from your ſumme, whether it conſiſts of tennes, or of hundreds, and by the reſt (which will be the tenth part of your ſaid ſum) you muſt multiply that ſumme which anſwereth to your number of yeares in that table which is of the nature of your buſineſſe, and ſo you ſhall

shall have your desire: For example, if you would know what an Annuity of 340 l. *per Annum* is worth for 21 yeares, look in that Table which is of this kinde, and answering to 21 yeares you shall finde 100 l. 1 s. 4 d. 1 q. and $\frac{15}{21}$ parts of 1 q. which sum you must multiply by 34, which is the tenth part of 340, and (to avoid the trouble of division) you shall not needs to reduce your 100 l. into shillings or pence, but multiply the said 100 l. by 34, and it yeelds 3400 l. then likewise multiply your 3 s. by 34, and it yeelds 102 s. which is 5 l. 2 s. then multiply your 4 d. by 34, it yeelds 136 d. the 100 d. is 8 s. 4 d. the 36 d. is 3 s. which is 11 s. 4 d: then must you adde this 11 s. 4 d. and the 5 l. 2 s. to the 3400 l. so all is 3405 l. 13 s. 4 d. which without dealing with the farthing or fraction, is neer enough the price, to give satisfaction to any buyer or seller; but if you will be exact, you must put 34 farthings, wch is 8 d. ob. more to your former summe: also you must multiply 16 the numerator of the fraction, by 34, and it yeelds 544, which divided by 25 the denominator of the said fraction, it yeelds 21 farthings, and $\frac{19}{25}$ parts of one farthing,

thing, that is, 5 d. 1 q. $\frac{12}{13}$, which with the foresaid 8 d. $\frac{1}{2}$ makes 1 s. 1 d. 3 q. $\frac{12}{13}$ of 1 q. which put to your former summe, is 340 l. 14 s. 5 d. 3 q. $\frac{12}{13}$ of 1 q. the just price of an Annuitie of 340 l. for 21 yeares, reckoning interest upon interest at 8 *per Centum*; now if this summe were 349 l. or 348 l. &c. then you must againe multiply your said 1 col. by 9, 8, or what your figure is, and divide the same by 10. which is the easiest division that can bee, and likewise the 3 s. and the 4 d. &c. and adding the product to your former summe, you have the just price of any such annuity, &c. And what I have here set downe for Annuities, may serve for all these tables that are for compound interest.

And in briefe, for the matter of annuities or yearly paiments, you may presently by on the view of the Table see within a little more or lesse, how many years purchase any yearly paiment is worth for any terme of yeares to 31: for so many times as you find 10 l. in the table answering to your number of yeares, so many yeares purchase is your annuity worth for that time: and 5 l. yeelds half a years purchase: 5 0. s. yeelds a quarter of a yeares purchase: and 25 s. yeelds half a quarter

quarter of a yeares purchaſe; ſo may you uickly ſee, that 14 yeares yeelds 8 yeares urchaſe & a quarter, wanting a very little; 5 yeares yeelds 8 years purchaſe & a halfe nd ſomewhat more, and ſo of the reſt: and is is moſt eaſie and moſt certaine.

And ſo may it eaſily be diſcerned by one- viewing the Table, that he that holds a eaſe, or that ſhould buy a Leaſe for 17 ares, worth 46 l *per Annum*, and would e ſuch a fine whereby hee might bring wne the rent to 16 l *per Annum*, muſt e for his fine 9 yeares purchaſe, and halfe uarter of a yeare wanting a very little, t is, 9 times 30 l (for ſo much is the year- ent cut off by this fine) and halfe a quar- of 30 l: that is, 270 l, and 3 l, 15 s; both 273 l, 15 s, which is ſomething more n the juſt fine to bee given, differing in portion ſo much from the ſame as 5 l. 0 d, differs from 11. 4 s. 4 d: the diffe- ce betweene 1,5,0. and 1,4,4. is 8 d, and auſe 30 l. the yearly rent in this queſtion times 10 l, the ſumme in the table; ther- muſt the difference be 3 times 8 d, that , which taken from 273. 15. there re- 273. 13. the juſt fine to be paid.

But now for reversions and impro-
ments I must give further direction. An
nuitie of 340 l. being frō the time of b
ing it, yearly to bee received, I finde
worth 3405 l. 14 s. 5 d. &c. but if there
no profit to bee received till after the ten
of 7 yeares, and at the end of 7 yeares 340
is to be received, and the like summe yea
for 21 years, then the monie is paid 6 ye
before-hand: for it is to be noted, that
yeare is past before any profit bee recei
by him that buyes a present annuity, so t
resorting to the Table of yearly decrea
finde that 10 l. paid 6 yeares before due,
paid with 61. 6 s. (the farthing & the fra
on I omit, for who will stand upon such
actnesse) so then multiplying 3405 by 6
yeelds, 20430. & for the 6 s. being $\frac{1}{20}$ p
of one pound, I take $\frac{1}{10}$ parts of 3405. l
by striking off the 5, that the tenth par
340 l. $\frac{1}{10}$ that is, 10 s, which being ta
3 times, it makes 1021 l. 10 s. which be
put to the former summe 20530, it ma
21451 l. 10 s. which being divided by
it makes 2145 l. 3 s. so I finde that 340
paid 6 years before-hand, is paid w^th 214
3 s: then for the 14 s, I say if 200 s, ye

25 s, what shall 14 yeeld? I finde by multiplying & dividing, that it yeelds 8 s. 6 d ½ and after that proportion for the 5 d. I may take 3 d and so I finde that a Reversion of 40 l. a yeare for 21 years, which 21 years begin not till after 6 yeares, is worth in present money 2145 l. 11 s. 9 d. ob. reckoning interest upon interest at 8 *per Centum* rebated for paiment before-hand.

And so he that buyes a purchase, and after the expiration of a Lease in being for 10 years, he is to receive 45 l. *per annum* more than at first, must value this improvement at so many yeares purchase as hee paies for his bargain which he is presently to enjoy: as if he value it at fourteen years purchase, then it is worth 630 l. if it were presently to bee enjoyed: then see by the table how much ready money will pay 630 l. ten years beforehād, for in this case it is paid 10 years beforehand. I find by the table that 4 l. 12 s 9 d. ob. paies 10 l. ten yeares beforehand, and according to my first direction, I take the tenth part of 630 l, that is 63 l, and that I multiply by the 4 l, which I finde in the Table, and it yeelds 252 l. then likewise I multiply 63 by the 12 s. in the Table, and

it yeelds 756 ſhillings, that is, 37 l. 16 s. then alſo 63 multiplyed by the 7 d. in the table, yeelds 441 d. that is, 1 l. 16 s. 9 d. and laſtly, 63 halfe pence is 2 s. 7 d. ob. All which put together, that is, 252 l. 37 l. 16 s. 1 l. 16 s. 9 d. and 2 s. 7 d. ob. doe make 291 l. 15 s. 4 d. ob. the price of ſuch an improvement; but if you will make uſe of the fraction in the Table, then it is 1 s. 1 d. & $\frac{11}{15}$ of a q. more, which is then the juſt and exact value, that is, 291 l. 16 s. 5 d. 2 q. $\frac{11}{15}$

And for the more eaſe in multiplying of ſhillings, you may obſerve how many angels, or how many crowns you are to take as if 17 s. 6 d. bee to bee multiplied by 48, you may obſerve, that 48 angels is 24 l. 48 crownes is 12 l. and 48 halfe crownes is 6 l. all which make 42 l, and thus you may either altogether ſave or much ſhorten the labour of multiplying and dividing, which with a little uſe will ſeem eaſie: and ſo for pence you may by practice ſhorten the buſineſſe, as if 1 d. be to bee multiplied by 48, you need but divide the ſaid 48 by 12. and it yeelds 4 s. your deſire; and for 2 d. divide it by 6, and it yeelds 8 s. and for 3 d. divide it by 4. & it yeelds 12 s. and for 4 d. divide

it by 3. and it yeelds 16 s. & for 6 d. divide it by 2. and it yeelds 24 s. all which are all one as if you did firſt multiply by 48. and then divide by 12. to bring it into ſhillings. And thus may you preſently perceive by onely viewing the table of yearly decreaſe, what if you be to pay 60 l. upon any occaſion 24 yeares beforehand, ſeeing the Table ſhewes that 1 l. 11 s. 6 d. 1 q. $\frac{11}{17}$, paies 10 l. 4 yeares beforehand: 60 l. will bee paid with ſix times ſo much, that is, (as you may quickly ſee) ſix pounds, ſix angels, ſixe teſters, and ſix farthings, beſides the fraction, which is five farthings, and $\frac{7}{17}$ more: and if your ſumme to be paid ſo long beforehand bee 600 l. then is it paid with 60 pounds, 60 angels, 60 ſhillings, &c. And thus may you ſhorten the buſineſſe whatſoever your ſumme be: and thus much (well obſerved) is ſufficient for directions.

Compound Interest direct at 8 per Centum.

The yearly increase of 1 0 l, wherby may be found the like increase of any summe to 3 1 yeares, reckoning Interest upon Interest at 8 *per Centum*, necessary for al such as put forth, or forbeare any sum of monie, for any yeares aforesaid. *Fractions are part of pence.*

16	2.18.04.1 $\frac{20}{25}$		

THis Table enſuing being calculated after 8 *per Cent.* doth preſently reſolve how much money any quarterly paiment doth ariſe unto, being forborne from quarter to quarter to 40 quarters.

If I would know how much mony 100 l. a quarter forborne 37 quarters wil amount unto. I looke under the title of quarters for 37, to wch this number anſwers 540345 from which I cut off three figures with my *prime Line*, and then accepting the number as is formerly taught, I ſee it makes in coin 540 l. 3 ſ. 6 d. juſt. The increaſe of 10 l. a quarter is found in the ſame manner cutting off foure figures: ſo 10 l. a quarter forborne for 37 quarters, will appeare to be 540 l. 6 ſ. 10 d. ½ q. And the increaſe of 1 l. a quarter ſo long forborne, by cutting off five figures will appeare to be 54 l. 0 ſ. 8 d. 1 q. The increaſe of 2 ſ. a quarter ſo long forborne will appeare (by cutting off ſix figures) to be 5 l. 8 ſ. and almoſt 1 d. and conſequently the increaſe of 1 ſ. a quarter will bee half ſo much, that is, 54 ſ. ob. And by multiplying your number (before you part it with your *prime line*) by 2, 3, or 4, &c. you ſhall have the increaſe of 2, 3, or 4 l. &c. hundreds, tens, or unites, &c.

A Table ſhewing the juſt increaſe of any
uarterly payment forborne from quarter
o quarter to 40 quarters; calculated by way
f compound intereſt at 8 *per Centum*.

As for example; I would know how much mony 30 l. a quarter doth arise unto being forborne 7 quarters. To answer this and the like, I looke in the table, and find the nũber which answers to 7 quarters to be 7434 2 8. Now if it had been 10 l. a quarter, I should onely have struck of foure figures from this number, and the qustion had bin answered: but because it is 30 l. a quarter, which is 3 times 10 l. therefore I first multiply this number by 3. & so it makes 22302 84, from which number striking off foure figures, I find that 30 l. a quarter forborn for 7 quarters arises to 223 l. 0 s. 6 d ¼. For 10 s a quarter take the halfe of the number answering to your number of quarters forborne, from which halfe strike off five figures, & so the question is answered. And you may for 5 s, 4 s, or 2 s. a quarter, take the fourth, fifth, tenth part of the product arising by the forbearance of 1 l. a quarter. Now I have not calculated these tables to the end that any man should exact these arerages for forbearance to the uttermost: but onely for direction of such, where, upon agreement, such arerages are to bee allowed and received. And the receiver is to observe that however this calculation is true, yet the strictnesse of it requires some mitigation.

A

AN EXCELLENT TABLE:

For the easie and exact Summing up of the price of Commodities.

For the reducing of pence and farthings into pounds, and pounds into pence and farthings; and of grosse hundreds into subtle pounds.

All without any use of Multiplication or Division.

The same serving also for a true and exact Table for Simple Interest direct at 5 *per Centum.*

By the said Author.

IF one ell of Canvas coſt 7 d. what ſhall 9876 ells coſt?

To anſwer this queſtion and the like you muſt looke for 7. the number of pence which one ell doth coſt, amongſt thoſe figures wch ſtand at the head or top of this table, for thoſe figures here, doe not repreſent months, as in the former tables, but the price of one yard, ell, &c. ſo looking under the ſaid figure 7. as if you would looke for the intereſt that 9876 l. yeelds in 7 months you ſhall finde for 9000. 262 l. 10 s. 0 d. and for 800. you ſhall finde 23 l. 6 s. 8 d. for 70. you ſhall finde 2 l. 0 s. 10 d. and for 6. you ſhall finde 3 s. 6 d. all which put together doe make 288 l. 1 s. 0 d. and that is the juſt ſumme that 9876 ells of Canvas comes to at 7 d. per ell. If your price be 8, 9, or 10 d. an ell, or leſſe or more, you muſt looke under thoſe numbers as now you did under 7. If your price bee 16 l. 2 s. 5 d. &c. the ell, then take out the ſhillings from your price, which is eaſily caſt up; and then bring your pence to the table, as aforeſaid: or you may looke under the number 12, and finde the ſumme answering at 12 d. an ell, which doubled, will

he ſumme ariſing at 2 s. an ell, &c. If your price bee one farthing or three farthings a yard, then you muſt look in that Columne next your right hād, where one ſide of the leafe ſhewes the ſumme ariſing at one farthing the yard; the other ſide ſhewes the ſumme ariſing at three farthings the yard. So ſhall you quickly finde that 9876 yards at 1 q. the yard, doe come to 10 l. 5 s. 9 d. and the ſame number of yards at 3 q. the yard come to 30 l. 17 s. 3 d. &c.

Now if you would reduce farthings into pounds, then you muſt take the great numbers next the left hand for farthings, and the ſumme which they amount unto you ſhall finde in the Columne next the right hand, ſo ſhall you ſee that 10000 farthings doe make 10 l. 8 s. 4 d. 9000 farthings doe make 9, 7, 6, &c.

If you would reduce pence into pounds, then you muſt take the ſaid great numbers next the left hand for pence, and the ſumme which they amount unto you ſhall finde in the next columne under the figure 1. ſo ſhall you preſently ſee that 9000 d. doe make 37 l. 10 s. 0 d. And if you would know how much 90000 d. amount unto, then

then looke into the Colume answering to 9000 under the number 10. where you shall finde 375 l. and so much doe 9000 l. make; and so of the rest.

Now for the reducing of pounds into pence and farthings, that is comprehended in the very first leafe of this table, where you see the two last Columes towards the right hand doe shew how many pence and farthings are contained in 1, 2, 3, 4, 5, 6, 7, 8 and 9 l. now to know by this how many are contained in any other number of pounds, is thus: how many pence, and how many farthings are

l.	d.	q.
in 9876	2160000	8640000
	192000	768000
	16800	67200
	1440	5760
	2370240	9480960

Answere 2370240 pence, and 9480960 farthings, which by the onely addition of Cyphers to the numbers set downe in this Table presently appeares: the reducing of grosse waight into subtle pounds is expressed in the first side of the second leafe of this table, and is performed after the maner aforesaid.

Now if you take this for a table for sim-

ple

le intereſt direct at 5 *per Cent.* then you uſt take the numbers at the head or top f the table for months, and the numbers in e firſt Columne towards the left hand ou muſt take for the ſums of mony, wher- f you would know the intereſt, juſt as in e former tables for intereſt: for example; would know the intereſt of 368 l. for 7 oneths at 5 *per Centum*, I finde under the ure 7 againſt 300. 8 l. 15 s. 0 d. againſt I finde 11. 15 s. 0 d. and againſt 8 I finde . 8 d. all which put together make 10 l. s. 08 d. the juſt intereſt of 368 l. for 7 oneths at 5 *per Centum.*

A demonſtration of the truth of the Tables for Compound Intereſt.

Or as much as I have heard ſome give heir verdits of the tables for compound ereſt before going, that they are indeed y good and neceſſary if a man could bee y aſſured of the truth of them, I have in- oured by this demonſtration inſuing to ove this ſcruple, cauſing each table rly to prove the truth of another, wher- he truth of them all is manifeſtly laid n, ſo that any man may truſt them that rves this triall, and may (if hee pleaſe) he ſame order make the like tryall.

I doe

I doe finde by the Table that valueth annuities, &c. that 10 l. a yeare for 21 yeares is worth 100 l. 3 s. 4 d. $\frac{1}{4}$ to trie the truth whereof I doe look in the firſt of theſe tables to ſee what this 100. 3. 4. $\frac{1}{4}$ will arise unto, being put forth for 21 yeares, there I finde that 10 l. ſo long forborne ariſeth to 50 l. 6 s. 9 d. then this 100 l. muſt ariſe to ten times ſo much, that is 500 l. 60 s. 90 d. all which is 503 l. 7 s. 6 d. then for the 3 d. 4 d. being the ſixt part of 1 l. is therefore the 60 part of 10 l. ſo that for it I muſt take the 60 part of the ſaid 50. 6. 9. more, and that is 16 s. 9 d. $\frac{21}{60}$ which being put to 50. 7. 6. it makes 504 l. 4 s. 3 d. $\frac{21}{60}$ Then I muſt looke in the ſecond table to ſee whether an annuity of 10 l. *per annum*, being forborne for 21 yeares, will ariſe to iuſt the ſame ſumme, *viz.* to 504. 4. 3. $\frac{21}{60}$ or not; I finde by that table that 10 l a yeer forborne for 21 yeares doth ariſe to 504. 4. 6. which differeth but 2 d. $\frac{12}{60}$ from the former ſumme the reaſon of which difference is becauſe I leave out the farthing and the fraction of the price of the ſaid yearly paiment of 1 l. for 21 yeares. for the table hath it 100 l. 3 s. 4 d. 1 q. $\frac{16}{21}$ and this triall I have acco-

d of 100 l. 3 s. 4 d. for the triall is much
e more easily made and the truth doth
ell enough appeare; not only the truth of
at table which valueth annuities, &c. but
o the truth of the two former tables, by
hich this triall is made, for if any of them
ere false, there could be no such true con-
rdancy betweene them.

And for the triall of the last of these ta-
s, which is for paiment before due, I
de by it that 1 l. 19 s. 8 d. 2 q. $\frac{21}{31}$ paies
l. 21 yeares before hand, now I must
ke in the first table to see if this 1. 19.
$\frac{21}{31}$ will in 21 yeares arise just to the said
ume of 10 l. or not. And because I would
e this triall to be plaine, though it bee
curiously exact, I put 1 q $\frac{1}{31}$ to this sum
it is 1. 19. 9. so shall I avoid the trou-
of fractions, and yet the tryall will bee
t enough; so I finde by that first table
10 l. put forth for 21 yeares, ariseth to
6 s. 9 d. then for this 1 l. being the tenth
of 10 l. I must take the tenth part of
said 50 l. 6 s. 9 d. that is 5 l. 0 s. 8 d $\frac{1}{10}$ the
whereof which I must take for this
is 2. 10. 4 $\frac{1}{10}$ then for as much as this
is no aliquot part of 1 l. I break it into
5 and

5 and 4: then it is the fourth and fifth pa
of 1 l. for which I muſt take the fourth pa
and the fift part of the ſaid 5.

5.0.	8 $\frac{1}{10}$	8 $\frac{1}{10}$ the fourth part is, 1 l. 5
2.10.	4 $\frac{1}{20}$	2 s. $\frac{1}{10}$: the fift part is 1 l. 0
1. 5.	2 $\frac{1}{40}$	1 d. $\frac{3}{4}$: So have I taken the
1. 0.	1 $\frac{6}{10}$	verall ſummes which ariſe
	3.9 $\frac{3}{10}$	1 l. of 10 s. of 5 s. and of 4 s.
10. 0.	1 $\frac{3}{40}$	which make 1. 19. 0. So I wa
		onely the increaſe of 9 d.

finde which, firſt as if it were 1 s: I take th
twentieth part of 5.0.8. which is 5 s. 0
but becauſe 9 d. is but $\frac{3}{4}$ of 1 s. therefore
muſt take but $\frac{3}{4}$ parts of 5 s. 0 d $\frac{2}{3}$ which
3 s. 9 d $\frac{3}{10}$ then adding together theſe ſeve
rall ſummes as in the margent appeare
they make 10 l. 0 s. 1 d $\frac{3}{40}$ the reaſon
which difference is the taking of 1 q $\frac{1}{37}$
my ſumme, for the more eaſe in making th
triall; now I know this triall might ſoone
have beene made by onely ſubſtracting th
increaſe of 3 d. from the fift part of 5 l. 0
9 d. but I have done it the other way for
more generall direction, becauſe it cannot
alwayes be performed with ſuch advan
tage. And this I hope will give ſufficient ſa
tisfaction to all ſuch as did conceive
a

any doubt of the truth of theſe Tables:

Which are moſt true, and of their truth
who ſtill will ſcruple make,
Are, of their large commodious uſe,
unworthy to partake.
But to my paines in framing them,
this added is, to plant
Beliefe, that none for want therof,
the uſe of them ſhould want.

And thus I end, reſting, (ſo long as God ſhall bee pleaſed) ready to reſolve any one (that ſhall repaire unto mee) in any doubt concerning theſe Tables, or in any queſtion of Intereſt for time paſt, or time to come, and to give plaine and briefe inſtructions to ſuch friends as ſhall deſire the ſame) touching decimall Arithmetick, and the performance of Multiplication, and Diviſion after an unuſuall eaſie way.

At my houſe in Bearbinder lane London.

FINIS.
